UMK3 - COMBO / JUGGLE THEORY

THE MK3 ENGINE IN ONE PAGE

Run-Jab: tap/hold R to close distance, then jab pressure with HP/LP. **Chain Kombos:** canned button strings are the reliable grounded backbone. **Pop-up chains:** strings ending in launchers create the real damage: run underneath/forward, then JK, aaHP, special or another chain. **Damage protection:** many launch/stun states reduce follow-up damage, so maximum hit count is not always maximum damage. **Corner:** reduced pushback enables re-launches and repeated aaHP/JK catches. **Teleporters:** Scorpion/Smoke/Sektor can convert awkward airborne states. **Projectile juggles:** Reptile Force Ball and Kitana Fan Lift are the easiest laboratories for learning timing.

PRACTICAL ROUTES

Scorpion: Spear (B,B,LP) -> chain -> pop-up -> JK -> Teleport Punch (D,B,HP) -> Spear/uppercut.
Human Smoke: Spear -> chain/pop-up -> JK -> Teleport Punch -> air throw/uppercut.
Reptile: Force Ball (B,B,HP+LP) -> run in -> pop-up chain -> JK -> aaHP -> Slide.
Kitana: Fan Lift (B,B,B,HP) -> JK -> Fan Throw -> run/aaHP catch.
Kabal: Nomad Dash (B,F,LK) stun -> chain -> pop-up -> JK -> aaHP/Gas Blast.
Cyrax: Net (B,B,LK) -> chain/pop-up -> bomb positioning; corner nets enable much stronger extensions.
Sektor: Teleport Uppercut (F,F,LK) catches falling opponents; homing missile forces movement before the chain starter.
Sub-Zero: Ice Ball -> pop-up chain -> JK -> aaHP/Slide; Ice Clone controls where the next juggle begins.

MORTAL KOMBAT TRILOGY - WHAT CHANGES

Use the UMK3 entry above for returning characters unless this section says otherwise. Trilogy adds characters, bosses, Brutalities, Aggressor and platform-specific variants.

SYSTEM ADDITIONS

Aggressor: fills through offensive action; when activated it temporarily boosts speed/power. **Brutality:** close-range rapid button chain performed at FINISH HIM/HER; the sequence finishes in an explosive uppercut. **Friendship/Babality:** Trilogy references vary by version regarding Block restrictions; use the version-specific behavior of your port. **Roster:** PS/PC/Saturn and N64 differ; Chameleon is associated with PS/PC/Saturn while Kameleon is the N64 counterpart.

TRILOGY - NEW / RESTORED CHARACTERS

CHAMELEON / KHAMELEON

Moves / Difference: Mimics/cycles ninja move sets. Chameleon = male ninja on PS/PC/Saturn; Khameleon = female ninja on N64.

Finishers: Use the active ninja's commands; transformation cycle is the mechanic.

Brutality: Version-specific

KLASSIC VARIANTS

Moves / Difference: Trilogy includes selected MK1/MK2-era variants (platform roster differs), preserving older move sets alongside UMK3 versions.

Finishers: Treat each variant as its own character for combo timing; do not assume UMK3 chain strings carry over.

Brutality: Version-specific

MORTAL KOMBAT TRILOGY - COMBO THEORY

TRILOGY IS UMK3'S ENGINE WITH MORE MATCHUPS

Returning UMK3 characters: start with the same run-jab, chain, pop-up, juggle and corner principles. **Aggressor:** when active, shorter punish windows become viable and familiar routes gain damage; avoid inventing new muscle memory solely around the temporary speed state. **Restored characters:** Cage, Raiden, Baraka and classic variants often rely more heavily on old-school special catches and universal aaHP/JK juggling than the strongest UMK3 pop-up chains. **Bosses:** large hurtboxes, armor/special rules and limited conventional combo behavior make them a separate matchup class.

TRILOGY PRACTICAL ADDITIONS

Rain: lightning stun -> run-in chain/juggle; water projectile can create airborne conversion opportunities.
Baraka: aaHP / chain pressure -> Blade Spin or Spark; corner is where his restored toolkit becomes most threatening.
Johnny Cage: deep JK -> Shadow Kick; aaHP -> Green Ball; Low Blow creates grounded mix rather than a juggle by itself.
Raiden: deep JK -> Torpedo; aaHP -> Lightning; teleport changes side after knockdown.
Noob: version-specific disable/projectile tools create guaranteed approach windows; confirm the exact port before memorizing long routes.
Classic variants: use MK1/MKII-style timing—deep JK, aaHP, projectile/traveling-special catch—rather than forcing UMK3 chains onto them.

VERSION MAP - KEEP THIS WITH THE GUIDE

UMK3 section: Arcade/MAME foundation. No arcade Brutalities. **Trilogy PS/PC/Saturn:** broad roster with Chameleon and restored/classic characters; commands/finishers can differ from N64. **Trilogy N64:** different roster/content tradeoffs and Kameleon instead of Chameleon. Where this guide says **version-specific**, use the command sheet for the exact port rather than assuming interchangeability.

QUICK MEMORY LADDER

1. Learn each character's **specials**.
 2. Learn one **ground chain** and one **pop-up**.
 3. Add **JK -> aaHP -> special** juggle timing.
 4. Learn the **corner extension**.
 5. Memorize Fatalities / Animality / Friendship / Babality / Stage input.
 6. Trilogy only; add **Brutality** and learn how **Aggressor** changes your punish timing.
- That is the shortest path from move sheet to competent classic MK3-engine play.
